Arkeia Announces Backup Replication General Availability

Maximizing Backup and Disaster Recovery for Remote Office Data

San Diego, Calif., Sept 9, 2008 – Arkeia Software, the leading provider of powerful, innovative data protection software, today announced availability of Backup Replication, a new product to seamlessly replicate backup data to one or more locations, ensuring backup data is protected and available.

Backup Replication is tightly integrated with Arkeia EdgeFort appliances and Arkeia Network Backup software and enables data transferability from one location to another. Backup Replication also offers interactive, chained, and scheduled duplication of data coming from total, incremental, and differential backups. Arkeia's Backup Replication provides organizations that have distributed data bulletproof redundancy and recoverability.

“Arkeia's Backup Replication works seamlessly with Arkeia Network Backup,” said Pierre Vanacker, Director of New Technology at Airborne Mobile, a mobile application company. “Managing Backup Replication jobs is easily scheduled through the Web interface and it ensures that data in my remote locations is also backed up in my datacenter.”

Tight integration with Arkeia Network Backup software and EdgeFort all-in-one appliances means companies can pick the optimum location for backup jobs to reside, and automate the movement of the data. Companies can backup to disk locally, archive to tape locally, and replicate offsite to another location or data center all within the same interface and scheduling tool.

“Companies need to protect data across their organization, especially in remote locations,” said Dave Elliott, GM Americas & Asia at Arkeia Software. “With the release of Backup Replication, companies can seamlessly move backup data from site to site, such as from a remote office to a corporate data center.”

Pricing and Availability

Backup Replication is available now and can be purchased as an addition to Arkeia EdgeFort or Arkeia Network Backup. Pricing for Backup Replication begins at \$2,500. For more information: www.arkeia.com/products.

About Arkeia Software

Arkeia Software provides federated data protection software and appliances for networked storage. Delivering solutions for mid-sized enterprises and multi-site organizations, Arkeia Software protects more than 100,000 networks for 5,000 customers in 50 countries. The Arkeia EdgeFort appliance, award-winning Arkeia Network Backup software, and Arkeia Options are delivered through a global network of distributors and value-added reseller partners.
